# ABOUT US

Foslit Lighting is where innovation meets illumination. Our capabilities stretch from paper sketches to final switch-on, influencing lives and producing enduring lighting experiences by combining design, engineering, and cutting-edge lighting technologies.

Our team of seasoned professionals brings together a wealth of experience in lighting design, technology, and project management. We thrive on challenges, turning ideas into reality, and creating immersive lighting experiences. With more than fifteen years of experience and over hundreds of installations, we have worked with clients from all walks of life, including developers, public and government entities, residential, co-working both indoor and outdoor spaces. From concept to completion, we take on and resolve the most challenging and demanding lighting issues. We aim to provide top-tier lighting solutions that not only illuminate your space but also enhance the aesthetics and functionality of your environment.

# Illuminating spaces across India and the Middle East since 2007

## Our Approach

“We believe in a solution based approach and customization according to the project requirements for a delightful & hassle-free commute experience”

## Our Philosophy

- Innovation & Design has always been a way of life at Archilum
- To enhance the built environment by providing innovative lighting
- We promote the development of sustainable, eco-friendly infrastructure by leveraging our experience & expertise

# Our Work Process

1 | Inquiry

The inquiries have been classified as a product or project inquiries, led implementations, or lighting design requests. After classification, we take the request for the process and check the details of it.

2 | Project Evaluation

After the organisation takes charge of and approves your request, the project evaluation procedure starts. The targeted product types, the project duration, whether the project has been placed under our protection, and the project needs are all assessed during the control phase of the project.

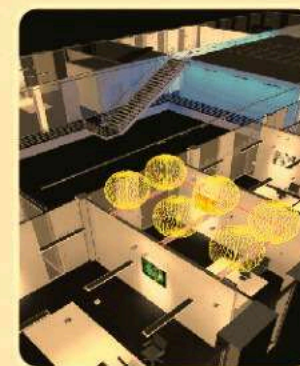

3 | Interaction with Stakeholders

In order to make sure that the final design meets the needs and expectations of all parties involved, stakeholder engagement is an essential part of the lighting design process.

4 | Project Approval

Project approval is a critical step that requires effective communication, thorough planning, and the ability to address stakeholders' concerns and objectives. We prepare a comprehensive project proposal that outlines the key details of the lighting design project.

5 | Lighting Proposal

We provide a proposal in accordance with the anticipated deliverables, based on the nature of the project. Providing a complete lighting solution that is customised to your unique needs is our aim. Our goal is to improve the specified space's usability and atmosphere while maintaining energy efficiency and design aesthetics into account.

6 | Final Evaluation

After the customer approves the project and the proposal, the contract is signed. The contract covers the decided product details, production time, payment terms, and other responsibilities. The client is kept informed of other phases and progress throughout the project.

7 | Manufacturing & Supply

Our company is a project-based manufacturing company. Regardless of whether a custom made product or a standard product is selected, production is done according to the project details.

8 | After Sales Support

As Archilum Lighting, we continue to support our customers in every way after the products are delivered, and the project is completed, as we do in each of the project stages.

# Working with Professionals

## Product

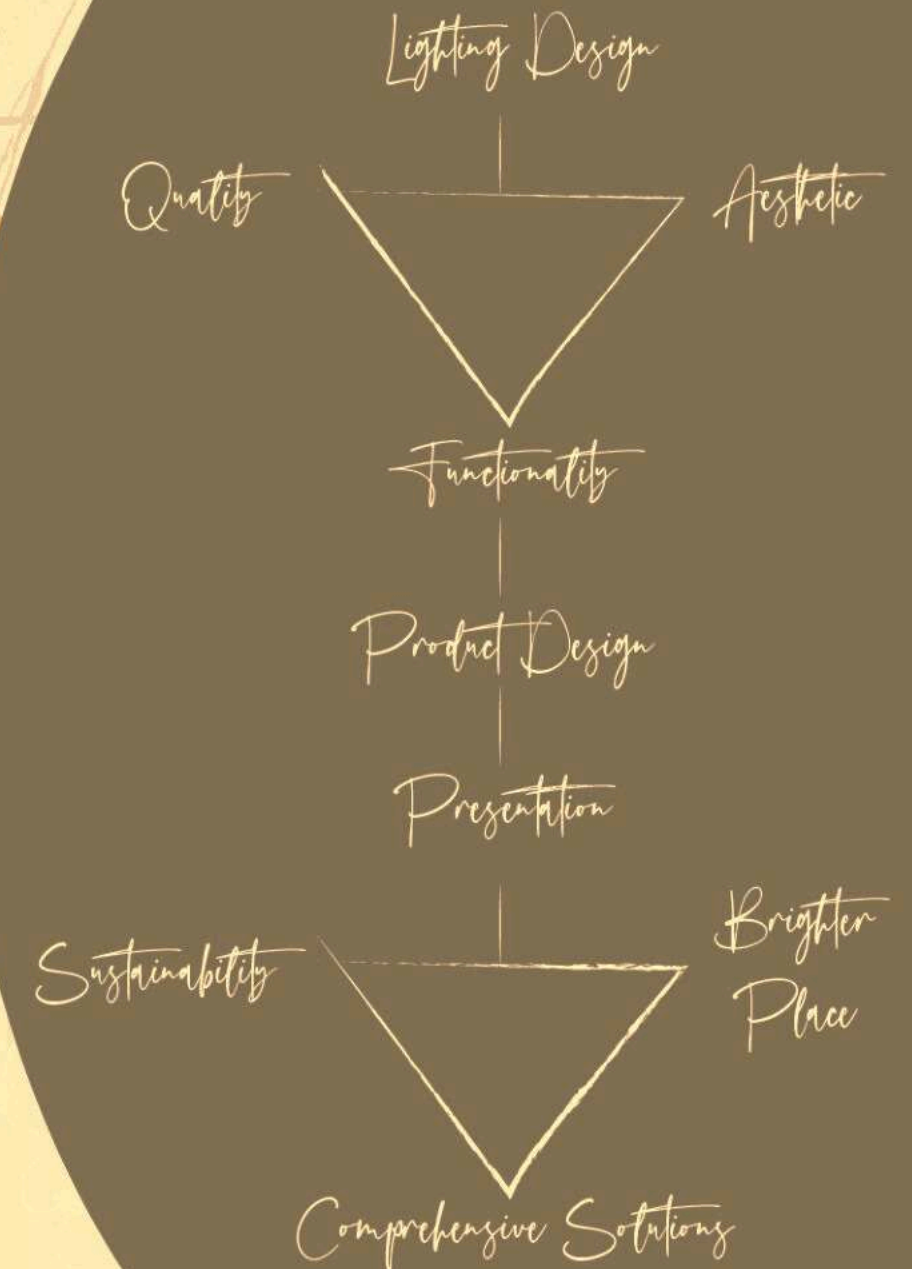

We are able to provide complete solutions for both indoor and outdoor lighting projects because of our adaptable, client and project-oriented viewpoints. We will offer the same support and give your projects our full attention, whether you select a standard or custom-made product.

- Conceptualise and develop your lighting scheme.
- Work together to develop all computations and visual materials.
- Integrate energy savings and automation.

## Project

We believe that delivering lighting solutions with the help of experts involves a collaborative and systematic approach. Our lighting design experts work together to ensure that the lighting solution meets the highest standards in terms of aesthetics, functionality, and energy efficiency, while at the same time conforming to the regulations.

- Organise a design workshop where all team members come together to brainstorm ideas and develop a unified lighting concept.
- All calculations and visual content will be prepared in cooperation with the stakeholders.
- Engage the client in ongoing discussions to gather their input and incorporate it into the final design.

# Transform your space with lighting

Light has a profound effect on our emotions, moods, and general well-being. It creates a mood, draws people in, communicates, inspires, and improves comfort and productivity in the workplace.

We specialize in the following lighting solutions:

Residential Lighting

Office Lighting

Retail Lighting

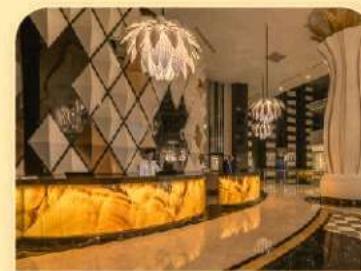

Sports Lighting

Industrial Lighting

Landscape Lighting

Hospitality Lighting

Wiring Accessories

Lighting Control

We collaborate to transform  
lives with light

Product Quality

Archilum Lighting concepts adapt to the overall architectural concept of a space. It is a matter of complementing the architecture with good lighting. We develop our products in close co-operation with renowned lighting designers.

Design Quality

Archilum lighting meets customer configurations, developing lighting designs to conform to the architectural intent of the customer and enhance the overall feel of the space. To achieve this, while still being compliant with standards and sustainability targets is a challenge that we continuously take on ourselves!

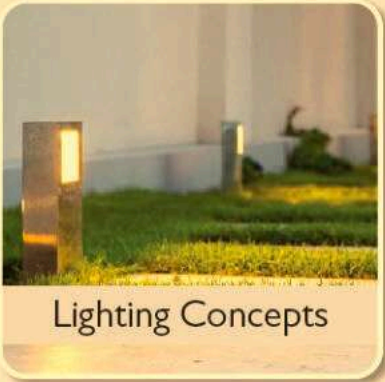

Light Quality

Archilum Lighting solutions offer much more than just standard compliant lighting. They can be adapted individually to very different needs, supporting users in their daily work tasks and enhancing overall productivity levels.

Design Solutions Provided

# Human Centric Lighting

Our response to light depends on the aspects of colour spectrum. Intensity and timing. Hence, it is important that the artificial lights in our surroundings consider these parameters. Human Centric Lighting solutions can support the human circadian rhythm, enhance concentration, prevent sleeping disorders and improve our overall well-being.

DESIGN FOR A  
GLOBAL LIFESTYLE

**legrand**

The background of the image is a dark, atmospheric scene featuring numerous vertical light pillars. Each pillar is composed of a series of small, warm-toned lights that create a sense of depth and perspective, receding into the distance. The overall color palette is dominated by deep blues and blacks, contrasted with the bright, golden-yellow light from the pillars. The lighting creates a futuristic and sophisticated feel.
